
After line menu and sub-menu ari yui

Posted by billye - 2011/03/15 13:53

Hello! It's fantastic ariyui the module menu. My question is this: the lines separating the items and subitems are displayed in some templates such as 'Beez' which is standard in Joomla. But in another I created through the lines do not appear Artisteer.

How can that be displayed?

the url is: <http://www.doriselmamariotto.com.br/index.php>

Thanks and sorry my english

Hello,

This separate line is defined into site template CSS file. If you want to avoid it, add the next CSS rule:

```
#left .yuimenu ul li
{
border-style: none;
}
```

If you want to add it to another template, try to use the next CSS rule:

```
DIV.yuimenu ul li
{
border: 1px solid #FFF;
}
```

Regards,
ARI Soft
