
Hover color of parent item

Posted by oorzaak - 2011/03/16 09:13

Hi there,

I made a vertical menu with submenu's appearing to the right of the parent menu items, using ARI YUI Menu (and with some help of ARI Soft forum moderator, thanks!). Now I have this question:

- When I hover over a parent item in the menu, the color changes from gray to orange.
- When I move my mouse pointer into the box of the submenu, the color of the parent item changes back into gray again.
- I would like the color of the parent item to stay orange, so the user can see to which parent item the submenu box belongs.
- Which css code should I add to achieve this?

Thanks,

Frits

Hello,

Information about menu structure and styles can be found [here](#).

Regards,
ARI Soft
