
Multiple URL-s

Posted by nick - 2011/04/02 16:31

Greetings, I am having a problem with google finding lots of duplicate content. The Url's are strange looking, for example an article normally displayed on:

domain.com/section/category/article is also shown under domain.com/another-section/another-category/section/category/article

Don't know where these links are being generated. Could it have something to do with ARI YUI? I have no reason to think so but I found this bugreport that had similar problems supposedly caused by another menu extension, so I must ask as I am running out of alternatives.

Any chance that ARI YUI might be causing this problem?

Thanks

=====

Hello,

Nobody has ever reported about the similar problem, but you can see links which are generated by "ARI YUI Menu" module and check correct these links or not.

Regards,
ARI Soft
