
Unique Backgrounds?

Posted by mAson - 2011/04/04 21:28

```
#menu .yui-skin-sam UL LI.yui-menu-item2 A.yuimenubaritemlabel-selected
{
background:url(2.jpg) repeat-x;
color:white;
}
#menu .yui-skin-sam UL LI.yui-menu-item7 .yuimenubaritem-active {
background:url(3.jpg) repeat-x;
color:white;}
#menu .yui-skin-sam UL LI.yui-menu-item7 .yuimenubaritem-active {
background:url(3.jpg) repeat-x;
color:white;}
#menu .yui-skin-sam UL LI.yui-menu-item7 A.yuimenubaritemlabel-selected
{
background:url(3.jpg) repeat-x;
color:white;
}
```

I'm currently using this for my horizontal menu to have different background images for each roll over image category, although I would like the background of the drop-down menu to match this colour. I think I need something similar like the above code for the .yuimenu .bd I believe? is this possible? I looked at the Yahoo documentation and am completely lost. I am trying to learn more CSS while I work on this project although I fear I have bitten off more than I can chew!! :(

Any help would be greatly appreciated!!!

Just played around with the following, although I cant seem to get each individual item to display a different background for the submenu if that makes sense?..

anyway here is the code ive tried using but no luck:

```
#menu .yui-skin-sam UL LI.yui-menu-item2 .yuimenubaritem-active, .yuimenubar .yuimenu
{
background:url(2.jpg) repeat-x;
color:white;}
#menu .yui-skin-sam UL LI.yui-menu-item2 A.yuimenubaritemlabel-selected,.yuimenubar .yuimenu
{
background:url(2.jpg) repeat-x;
color:white;
}
#menu .yui-skin-sam UL LI.yui-menu-item7 .yuimenubaritem-active .yuimenubar .yuimenu
{
background:url(3.jpg) repeat-x;
color:white;}
#menu .yui-skin-sam UL LI.yui-menu-item7 A.yuimenubaritemlabel-selected .yuimenubar .yuimenu
{
background:url(3.jpg) repeat-x;
color:white;
}
```

Hi,

Its currently localhost, I will deploy the site this evening and send you the link in about 8 hours!

Thank you!

Background colors of menu items are changed on mouse hover, do you want to use these background color for non-hover state?

Hi I want the Background of the submenu on hover to match the background on the actual items.

IE: the first link has a green image as the background, but the second link displays the green background image still.

Any Ideas? Really really stuck with this, and without creating 5 new menus, im unsure how to do this.

All your help is appreciated. Just bought your image pop-up module, keep up the good work! thank you.

Hello,

Could you provide link to page where we can see the menu?

Regards,
ARI Soft

hi,

the menu is located here:

<http://www.masongaming.co.uk/thp123>

I have also uploaded an image to illustrate what im trying to do better: <http://www.masongaming.co.uk/thp1234.jpg>

Hello,

Sorry for delay. It seems the menu looks like on your screenshot.

Hi,

I dont think the screenshots are clear..

The Back ground the lower arrow is pointing to (behind the submenu / options) should correspond to the background img that is being shown behind the menu item itself ie: option 1 is correct green / green. however option 2 (products) is red / green when it should be red / red.

I want there to be different Back ground images on the submenu so i can match them to the menu items.

thanks for your responses so far.

Add CSS rules in the next format:

```
#menu .yui-skin-sam UL LI.yui-menu-item .yuimenu
{
    background-image: url(background.jpg);
}
```

Where is menu ID of main menu item. For example use the next CSS for "PRODUCTS" menu item:

```
#menu .yui-skin-sam UL LI.yui-menu-item7 .yuimenu
{
    background-image: url(background.jpg);
}
```

Just specify appropriate background image for "background-image" CSS property.

PS: Menu item ID can be found in Joomla! menu manager.
