## submenu behind menu

Posted by blech - 2011/04/05 08:38

---

Hello, I have a problem with Ari Yui Menu because the submenue dissappear behind the menu below. See [www.vfbkipfenberg.de](http://www.vfbkipfenberg.de) (Menu Sparten - Turnen -) - thanks ... <http://www.ari-soft.com/images/fbfiles/images/submenu.gif>

---

Sorry, I am a beginner in joomla und ari yui menu. Is the submenu "Turnen" behind the body or only behind the other menu "Anmeldung" and is the error the same ? Can you give me another tip for modifying my template because the link is not so informative. Can I modify the distance between the menu and the submenue? The Ari Yui Menu is greatefull but so I cannot use it - thanks ....

This is the problem with site template, not with "ARI YUI Menu" module. It can be fixed if add support of module CSS class prefix to site template. You can contact site template developers or Artisteer developers that they resolve this problem.
