
configuration guidance?

Posted by deannab - 2011/04/06 00:25

good day

i've been doing joomla for a while now, but new menus have always seemed to escape my understanding. i really need a drop down menu though, and the comments for yours said it was really easy.

not easy enough however for my limited knowledge. is there any documentation anywhere that explains how to configure? i really need help.

thanks

Hello,

The module works as standard Joomla! menu module. More information can be found [here](#).

Regards,
ARI Soft
