
Sub Menu Hidden Behind Content

Posted by spendracing - 2011/05/05 12:25

Help me please - I am having problems with the submenu being hidden behind the content.

<http://thegolfportal.net/golfportal/index.php/clubs>

You will see the menu clubs, being displayed and the sub menu comes out but will not appear over middle.

I have tried various z-index changes but none seem to work.

Thanks in advance

Hello,

Add the next CSS rule:

```
body #top,  
#top div.mod-box div.box-2  
{  
    overflow: visible;  
}
```

Regards,
ARI Soft
