
Submenu On RIGHT is hidden behind main Content

Posted by deadrobot - 2011/05/17 15:38

Hello there! Your module will save my butt if I can get it to work!

I've figured out how to make the menu pop out to the left on a right hand menu, great! But now it's hiding behind the main content.

I've searched a bit and found that most themes have a z positioning issue, and tried to fix it through the CSS styles field in the Module admin.

Because my site is our company's Intranet, I can't post a link, but I'm attaching a txt file of the source.

Any help would be amazing!

Thanks again

Hello,

Provide page files of the page with the menu by email. This process is described here.

Regards,
ARI Soft

Add the next CSS rule:

```
body .s-c-s .col3 {  
  overflow: visible;  
}
```
