## newbie CSS questions

Posted by tosh124 - 2011/07/01 21:11

---

Hello,  
the menu works very well, but I need to change a couple of items and despite trying some of the instructions on the forum I cannot get them to work.  
I am trying to;  
-change the background colours on the horizontal menu to blue normally and red when in focus  
-when in the vertical menu the sub menu items disappear behind the rotating image, how can I have it on top of the image?

I have pasted some of the code in the CSS box of the template and also in the CSS box in the menu options, but neither seem to work.

The site is still a work in progress and is [www.historicferriby.org.uk/index.php](http://www.historicferriby.org.uk/index.php)

Many thanks for any help.  
cheers  
Col

Hello,

1. Add the next CSS rule:

```
#ariyui81 .yuimenubaritem-selected
{
    background: none red !important;
}
```

2. Sorry, but we can't reproduce this problem on your site.

Hi,  
thanks very much for the reply.  
My apologies, point 1 relates to the sub menu items when in the horizontal mode. Because the background only comes into focus on hover you cannot see the sub menu items as the text is black with a clear background. Also, is there any way to right align the menu horizontally?

I have now put the menu back to the vertical menu so that you are able to see the menu on the index.php page.

Thanks again for your help.

About question #2, add the next CSS rule:

```
body .s-c-s #col2
{
    overflow: visible;
}
```

Regarding to question #1, could you provide screenshot where we can see what do you want to achieve?

Regards,  
ARI Soft

Fantastic it works :), you make it look so easy :blush:

I have put back in the top menu with the top menu partly populated, but as you can see the text in the sub menu fades into the background and is left aligned whereas it would be great if it were right aligned so that I could extend the logo.

Many thanks again for patience & support.  
Best wishes  
Col

Sorry but if I could get it to look like that I would have done :unsure: :(

The menu as it stands is almost finished with the exception of  
-right alignment as it will only c50% of the actual cell width, which would put it below the search box  
-a white background to the items not in focus in the sub menu so I can see the actual items in the sub menu

<http://www.historicferriby.org.uk/index.php/>

Does that make sense?

cheers

Open index.php file of site template, find the next code:

and replace it with the following code:

Excellent! I can see the sub menu! And my final question (honest!!),how do I right align the menu below the search box so that I can make the logo a little bigger?

thanks again

Try to add the next CSS rule:

```
#ariyui81
{
  float: right;
}
```

Doh!!  
Talk about making life hard, much easier to align the module right...

Thanks for all your help, VERY much appreciated.
