
only active sub-menus with two modules

Posted by dirk - 2011/08/05 08:08

Hi,

I am running the ARI YUI Menu with two modules. One shows only the top level of the menu level. The second one shows the second and all additional levels.

I have set the second module option "Show only active sub-menus" to "Yes" as I don't want to see the second level entries of the other top level entries.

When I now click in the frontend on one of the second level menu items the other menu items of that level disappear.

Is it possible to show always the second and below menu entries of one top level menu entry even though I clicked on one of them?

Thanks for Help.
Dirk

Hello,

Is it possible to see the menus on your site?

Regards,
ARI Soft
