## Joomla 1.7 Menu 100% width problem

Posted by titusweb - 2011/08/20 20:28

---

I am currently using Yui Menu on the 1.5.23 install of Joomla with no problems obtaining 100% width as my template is fluid.

Duplicating the same settings that I have on 1.5.23 in the 1.7 installation using the latest Yui Menu, I can't seem to make the menu 100% width to match my old site's version.

I have tried the following CSS Rule as shown in a different posting for 100% width:

```
div#main-content
{
padding-left: 0;
padding-right: 0;
}
```

But this did not work, I am using the same template on 1.7 as I am on 1.5.23 (the author released a 1.6 version).

I can make the menu any width I want using pixels, but since this is a fluid site and resizes dynamically, that won't work too well. :)

Hello,

Provide link to page where we can see the problem.

---

Add the next CSS rule:

```
body #leftmenu
{
width: 100%;
}
```

---

The code doesn't extend the menu to full width.

The site is here

And my old site is just one level down (Removing the j17 directory).

---

See how on my old site it is full length just fine, that is what I am trying to accomplish.

---

Provided code doesn't work because you changed module position or site template. Use the next code:

```
body div.pw
{
width: 100%;
}
```

Thank you, that code fixed it.
