
Top menu is overlap by right modules

Posted by Henriques - 2011/10/07 22:09

Hi,

I`m using ARI YUI Menu and it suits me fine. Thanks. :)

My only problem is that it gets overlap by the right modules. I saw two posts with the same difficulty but i couldnâ€™t apply the solution.

Can you help me?

If you can, here is the site: <http://www.sistemagestao.com/> (try the SST menu on top. it is overlaped by the right modules)

Big thanks.

Hello,

Add the next CSS rules:

```
body #header
```

```
{  
  position: relative;  
  z-index: 2;  
  overflow: visible;  
}
```

```
#header #logo,
```

```
#header #sloganmenu
```

```
{  
  height: 74px;  
}
```

```
#header #menusearch
```

```
{  
  height: 28px;  
  line-height: 28px;  
}
```

```
body #content
```

```
{  
  position: relative;  
  z-index: 1;  
}
```

Regards,
ARI Soft

Works fine.

Many thanks for your super fast help.

:kiss: :)
