Top menu is overlap by right modules Posted by Henriques - 2011/10/07 22:09

Hi,

IÒ'm using ARI YUI Menu and it suits me fine. Thanks. :)

My only problem is that it gets overlap by the right modules. I saw two posts with the same difficulty but i couldn't apply the solution.

Can you help me?

If you can, here is the site: http://www.sistemagestao.com/ (try the SST menu on top. it is overlaped by the right modules)

Big thanks.

Hello,

Add the next CSS rules:

```
body #header
position: relative;
z-index: 2;
overflow: visible;
#header #logo,
#header #sloganmenu
height: 74px;
#header #menusearch
height: 28px;
line-height: 28px;
body #content
position: relative;
z-index: 1;
Regards,
```

ARI Soft
