
Forcing YUI menu to open upwards

Posted by jonski - 2011/10/17 13:24

Hi, I've customised the ARI YUI menu so it pops up and now uses the shadow to create what looks like a call out bubble pointer (see here:Arjua Test Site)

If there isn't enough room at the top of the page the menu will drop down (rather than up) and if there is almost enough room above the menu it pulls up a scroll bar effect.

Is there anyway to switch off the scroll and force the menu to open upwards regardless of whether there's enough room or not? Ultimately this is very much style over functionality!

Any help much appreciated!

Cheers

John

Hello,

Try to set "Min scroll height" parameter to 9000 for example.

Hi, thanks for the quick response. That's got rid of the scroll bar but the menu still drops down if there isn't enough room at the top of the screen.

Anyway to make it always pop up above the menu bar regardless of how much room there is?

Cheers

John

Sorry, but the module doesn't provide this ability.
