
center the menu

Posted by nadine - 2011/10/25 14:34

Hello,

How can I center the menu on <http://www.tv76.nl/>

So that the menu items are automatically divided in such a way that there is an equal space on the right and left of the menu.

I've already tried some stuff.

My last attempt was:

```
BODY #ariyui80.yui-skin-sam LI A
{
text-align: center !important;
}
```

:(

Can you help me??

Thanks in advance

Hello,

Could you provide a screenshot where we can see what do you want to achieve?

Regards,
ARI Soft

I hope this image makes it a little bit clear.

I would like that the space at the black arrows automatically are the same.

That the menu centers.

When I do it with padding it looks okay in Firefox and Safari. But not in IE9.

When I make sure it looks ok in IE9 it looks like this in Safari and Firefox.

Is it clear like this??

Thanks for your help!

Add the next CSS rules:

```
#ariyui80
```

```
{  
  text-align: center;  
}
```

```
#ariyui80_menu
```

```
{  
  display: inline-block !important;  
  zoom: 1;  
  *display: inline !important;  
}
```

```
body #ariyui80 .yuimenuubar > .bd > ul:after
```

```
{  
  width: auto;  
}
```

Regards,
ARI Soft
