
Change color of parent menu when submenu is active

Posted by DVor - 2011/11/30 01:19

Hello,

I have changed the color of selected and active menus with the following code in `safe_mode.css`:

```
{ $id }.yui-skin-sam UL LI.yuimenuitem-selected
{
  background-color: #555555;
}

{ $id }.yui-skin-sam UL LI.yuimenuitem-active {
  background-color: #757575;
}
```

This works well. However, as submenus are invisible when the parent menu is not selected, I would also like the parent menu to change its color when the submenu is active.

I would therefore need something like "yuimenuitem-hassubmenu-active", but this does not seem to exist.

Is there any way to do this?

Yours DVo

Hello,

Download and upgrade the module. New version is highlighted parent menu items too.

Regards,
ARI Soft
