
about highlight of submenu

Posted by yjiang92131 - 2011/12/27 21:33

Hi,

Thank you for your good work, now my menu looks much more better. however there are still some things i would like to improve:

- 1). the highlight of submenu (<http://www.aprexbio.com/apx/services.html>, "compound screening services) is not wide enough to cover all the words, how can i make it wider ?
 - 2). is there a way to move the menu a little bit higher on the navl bar, so i can increase the fonts of the menu. right now if i increase the fonts, it will take more space down, the menu will not stay in the middle.
 - 3). the mouse moves to the menu (services), the submenu will show up, i saw some people click the menu even when the menu show up, and the click make the sub menu disappear, if you can make it work like this: one click, show submenu, and second click make the sub menu go away. it would be very nice, more user-friendly.
- thanks.

best.

yong

Hello,

These problem with site template styles for default menu. Open index.php site template file, find the next code:

and replace it with the following code:

Regards,
ARI Soft
