
Submenu issues

Posted by qpidity - 2012/03/01 08:26

Hi,

I have two ARI YUI menus here. I'm having issues presenting the submenu items for the top menu in the same way as they are presented for the lower menu (menu items in capital letters). Specifically:-

I want the same background colour - I've set to white but what I'm getting is a grey - I'm not sure why.

Also I've tried to align the text left but as you can see it's more aligned to the right.

Can you please advise ? I'd like the submenu items to appear exactly as the second menu.

Thanks in advance

Hello,

Add the next CSS rules:

```
div.moduletable_topmenu3 .yui-skin-sam ul
{
  float: none;
}
```

```
#top .yuimenuubar A
{
  text-transform: uppercase !important;
}
```

Regards,
ARI Soft

I have another small problem.....

I had lost the white background colour on my submenu (not sure how) on the live site so I added the following:

```
div#ariyui106.yui-skin-sam .yuimenu .bd ul {background:none #fff;text-align:left;}
```

This put the white background back but removed the on rollover/hover blue background on the submenu items . When I remove this CSS code that I added then I lose the submenu white background. Perhaps you can explain what I need to do here to correct the issue. I want the white background and the blue background on hover.

Please advise

Thanks

We can't open your site. It requires credentials.

That's not the problem site - I would prefer to PM the URL - can I do that ?
