
Remove all styles, add separators and center

Posted by Alucardvx - 2012/06/21 20:31

Hello, i've just installed ARI YUI Menu and it's working nicely for my footer content i'm working on. I wish to do some changes via css:

I'd like to:

â€¢ Remove all styles (just like in safe mode), then change the text color and hover color.

â€¢ Add separators between menus "|" with same text color (avoiding start and ending)

â€¢ Center the menu vertically in the footer position.

â€¢ Avoid overlapping of the below content by expanding the menu and pushing the content down. (Same behaviour as the header menu showing submenu items)

Attaching an image with the content i'm trying to achieve.

Demo page is here: <http://www.postgradoupsa.edu.bo/dPolitate/index.php/en/mediaeng> (Hover over "Information" on both top and footer menus)

Thanks for your support.

Hello,

"ARI YUI Menu" is a drop-down menu. If you need a simple menu, use standard Joomla! menu is better choice. It doesn't load javascript files and has simple HTML structure, but if you want to use "ARI YUI Menu" for this purpose and customize it, this link should be helpful. It contains information about menu HTML layout and styles.

Regards,
ARI Soft
