
Trying to add ARI YUI menu to Artisteer template

Posted by fribse - 2012/11/18 10:31

I have my normal main menu in position user3.

I want to add another menu in position user2, when an item is selected in user3.

I've created the logic for that, instead of creating a horisontal menu that I asked for, it creates a vertical transparent with dropdown.

The template is created in artisteer3. <http://www.ari-soft.com/images/fbfiles/images/menu-0b2fee2da475786a24ddc0fe6df96063.png>

Hello,

Where we can see the problem?

Regards,
ARI Soft

I've placed the module on the frontpage on test.dkdb.dk

Ignore that the links won't work, there are some access restrictions for higher level access, and the menu is not meant to be on the front ;-)

When we try to open test.dkdb.dk site, it redirects to dkdb.dk.

? Say what? if I write test.dkdb.dk or <http://test.dkdb.dk> here in firefox/chrome/ie it goes straight to the page?
It's a sub domain on the same hosting server as the real site.

Ok, I think I found it, I removed the lock, and disabled the geolocking on the testsite.

CSS file which is used by the module can be loaded due to configuration of your web server. You can see it if try to open this link into a browser. Set "Safe mode" parameter to "No" in module settings.

Ah, ok, excellent, is that because it wants to directly reference a file, which admintools doesn't allow? I've set it to 'safe mode' off, and now it shows the menu as it should, thankyou very much!
