
JA Purity Template

Posted by assist - 2010/04/19 02:56

Site = <http://www.assist-associates.com>

I am trying to use ARI YUI menu module on a modified JA Purity based Template. This template defaults to a Moo type template and has option for CSS (Son of Suckerfish type) menu. Current Setting is for Moo Type and gets funny results? CSS results are worse.

Any suggestions for getting rid of Moo or CSS interference would be appreciated.

Hello,

Add the following CSS rules to your template CSS file:

```
.yui-skin-sam .bd UL LI {  
    background-image: none;  
}
```

Regards,
ARI Soft
