
Diferent color for Active menu

Posted by vetarvomagla - 2010/04/20 01:27

How can i make diferent color for active menu? I have tryed everything. Nothing work.

Here is what i want.

Hello,

Add the following CSS rule:

```
.yuimenubaritemlabel-selected
{
    color: red !important;
}
```

OK, this work.

I have one more question. The active menu remains activ until the user move the cursor again over the menu. So the active menu disapear. And all are the same. I want the active menu to remain active, even the user move the cursor over the others menu.

Thanks.

Unfortunately 'ARI YUI Menu' doesn't provide this ability, but we'll think about implementation this feature in a future release.
