Horizontal Menu displaying vertically

Posted by dbarry722 - 2013/05/14 11:09

_____

Hi Folks.

I originally had the ARI EXT menu module installed but due to a problem with horizontal menus extending past the max size of screen, users couldn't see some menu items so, to counteract a problem with the ARI EXT Menu I installed ARI YUI but,

ARI YUI won't display the menu horizontally.

Site is at http://rnli2.ondanet.info

Could anyone shed any light on why this would be happening. I've set the option to horizontal but what you see is what I get. I use position-1 in my template - same position as ARI EXT menu used (still installed but disabled).

Re-enabling the ARI EXT menu to check settings does show the menu horizontally but when I switch back to ARI YUI, it show my 'horizontal' menu vertically even though it is set to horizontal in options.

Many thanks

Declan

Hello,

Menu CSS file can't be loaded. It can be a problem with server configuration.

Check web server error log, it can contain information about the error.

Regards,
ARI Soft

_____

Hi..

I've had a look at my error log and the I see the following entry

    SoftException in Application.cpp:601: Directory "/home/ondaneti/public_html/rnli2/modules" is writeable by group, referer: http://rnli2.ondanet.info/

Any idea on what this actually means? I've looked at the permissions and they are set at 755

Hi folks..

Just discovered problem. The top level modules folder was set at 777. Once set to 755 the menu worked fine.

Many thanks

Declan
