
How to make fonts bold?

Posted by kober - 2010/05/23 11:01

I would like to make fonts bold but only in main menu not in submenu. I have tried everything but can't get it working. Maybe you could give me some advice?

Hello,

If you use the latest version of "ARI YUI Menu" (v. 1.0.5), you can type the following code in "CSS Styles" parameter:

```
#{ $id } .yuimenu UL .yuimenuitem UL .yuimenuitem .yuimenuitemlabel {  
    font-weight: normal !important;  
}
```

```
#{ $id } .yuimenu UL .yuimenuitem .yuimenuitemlabel {  
    font-weight: bold !important;  
}
```

Regards,
ARI Soft

Thank you for the answer

something similar worked for me:

```
#{ $id } .yuimenu UL .yuimenuitem UL .yuimenuitem .yuimenuitemlabel {  
    font-weight: normal !important;  
}
```

```
#{ $id } .yuimenu UL .yuimenuitem .yuimenuitemlabel {  
    font-weight: normal !important;  
}
```

and in module I set Font weight to bold
