## Restrictions

Posted by net4fun - 2010/06/03 20:42

---

Hi, i installed this menu, and its working great. But what about links that are restricted to registered members, and special links only for admins and so on.

I have this menu enabled only for registered members, but i dont want them to click the special links, because it gives them an 404 error.

Hello,

The module doesn't provide this possibility due to it's Joomla! limitation. Joomla! provides possibility to set access level for menu items as 'Registered' or 'Public'.

What you mean? If you set a menu item access level to 'Registered', it will be clickable only for logged users or it will be hidden, if 'Show hidden items' module parameter set to 'No'.

Ok, i can see that working now for public. But what about special links. Registered can also see special links.

We can adjust the module that it accepts 'Special' access level for all user groups except 'Registered' and 'Guest'. Is it suitable?

I dont think that would work for me. But someone else could like that.

Its realy funny that all other, old and bugged menu modules have this function, and the best looking and easy configured havent got it. Its like that contact module, someone made - that only admins have access to use it. That was the funniest thing i have ever seen.

But i will be still using this module, its great :)

Could you say, what modules you mean? If you open menu item page, you can see that it only provides 'Public', 'Registered' and 'Special' access levels and nothing more. How module should know for what user group(s) specific menu item should be available?

Ok, i realy dont understand it now. I know about 'Public', 'Registered' and 'Special' access levels in joomla menu manager. But this menu module only uses the 'Public' and 'Registered' one. I'm not a php coder so i dont know how things work. And i have never looked into the mod\_mainmenu to find this out or any other menu module.

This is yust a suggestion, to make "special" links not visible to registered. They are not visible to public, so that is something.

Hello,

We have updated the module. Now it shows menu links with 'Special' access level only for logged users who have not 'Registered' user group.

Now this is yust great!

I cant belive this, you rock. This is a must have menu module, if someone asked me now :)
