
setting up the menu

Posted by ScavenGypsy - 2010/07/23 21:09

Hello

I am helping a friend set up her joomla site, and she installed the ARI YUI menu, and I've gone into the joomla manager and chosen to manage that module, but no matter what I do, the menu doesn't show up. I'm still rather new to Joomla, but I have been handcoding html, css and javascript for almost a decade, so I'm not sure why this is being so difficult.

the site is <http://superstarhippiechick.com/> and currently, the horizontal menu that shows up (Artists, Merch, Events, etc) is not the ari menu, EVEN THOUGH I have disabled those elements in the regular menu and enabled them in the ari menu.

Any help you can offer is greatly appreciated. Thanks.

Hello,

It seems this problem occurs because site template and 'ARI YUI Menu' use the same javascript library called YUI. We can investigate this issue in more details, if you provide temporary access to your Joomla! backend by email and activate 'ARI YUI Menu' on your site.

Regards,
ARI Soft
