
Submenus in first line drop behind items in second

Posted by gmiller - 2016/06/26 18:15

I have multiple lines of menu on my site (nazarethclassof66.org)

When I open a menu option on the first line with submenus, they drop behind the second row menu option. If you need to see what i mean you can go to the site and click on class of 66 info..... i am doing some work on the menu so some of the others are not working properly at this time

Thank you very much for your help

I fixed the problem by modifying the menu but still would like to know if there is a programming fix for other menus that i can't modify the items to fit on one line.

Again Thank you

Hello,

Could you send a screenshot where we can see the problem?

Regards,
ARI Soft

Like i said earlier, I avoided the problem by changing the menu. I made some of the menu options as submenus so i have only one line of menu items so i can't send a screen print but i do appreciate the quick response.
