Horizontal Submenu?

Posted by TimScudder - 2010/07/29 02:23

_____

For the site I am developing http://www.devxtemp.info/joomla/. I just installed YUI Menu (and am happy with what I see so far). A couple of questions:

1) I am trying to set up a horizontal menu for the first and second level - I don't see anything in the module parameters.

2) I tried to the Capitalize transform,, but nothing happens.

3) What is the best way to customize the colors of the menu elements?

4) Is there any documentation?

Thanks for your help.

_____

Hello,

Regarding your questions:

1) The module doesn't provide this ability, it can display horizontal menu on the first level.

2) It works. Capitalize text transform do the following: transforms the first character of each word to uppercase. The module uses 'text-transform' CSS property, you can read about it here.

3) CSS rules can be used for this purpose. Specify what colors you want to change and we'll try to help you.

4) The module is based on YUI Menu widget. Information about menu style can be found in Skinning Reference section.

Regards,
ARI Soft

_____

Is there anything that does provide horizontal second level menu? This is a requirement.

_____

You can try to play with CSS styles. For example, try to set "float" CSS property to "left" for the sub-level menu items.

_____

Thanks for the help on the other questions - that helps.

Can you provide an example of changing a CSS style and which file I need to edit to change the style (I am very new to Joomla)

_____

You can place it in 'CSS Styles' parameter in module settings. You can use something like this:

```
#{$id}.yui-skin-sam .yuimenubar ul ul
{
  width: auto;
  position: relative;
}

#{$id}.yui-skin-sam .yuimenubar li.yuimenuitem
{
 float: left;
}
```

_____

Thanks - does {$id} need to be replaced by a literal string? If so, what is the format?

_____

This is predefined variable and the module replaces it with module container element ID.
