Module disappear when mouseover ariyui in IE7

Posted by kosfar - 2010/08/02 10:03
_____

Hello,

when I am in IE7 and I mouse over the ariyui menu, the top menu of my site disappears.
It shows up in the first place when the page loads, and then disappears.
It works fine in Firefox and IE8.
I have tried hours to fix this by editing the css files of my template but I have not found out yet what is going on.

Here is the site
https://newsite.telecompare.gr

Any help would be really appreciated.

Hello,

Try to add the following CSS rule:

.Sheet-body table
{
  position: relative;
}

Regards,
ARI Soft

Thanks, that worked fine!

Surprised that you solved it so quickly...If you like, send me some guidelines (weblinks etc) in order to be that efficient for myself,too!

You are welcome. Could you specify what guidelines you mean? About CSS, IE issues or something another?

Regards,
ARI Soft

_____

I mean for CSS issues.

I just noticed that with the code you provided, the top menu is now visible in IE7 but my joofish flags are not clickable any more in Firefox and IE8!
Regarding the issue that joomfish flags are not shown up in IE7, I am now working on it.

As you may have guessed, I am in the middle of a browsers compatibility "battle".

_____

Try to add the following CSS rules that resolve issue with flags:

```
.Sheet-body .oiglwsses
{
  position: relative;
  z-index: 2;
}

.Sheet-body div.Header {
  z-index:1
}
```

_____

It seems you are playing with HTML layout on your site because this CSS rules are deprecated.

_____

Ok...Sorry for that...
One of my colleagues was playing with the css file without letting me know.
Now it is stable again...
Please, have a look.

Thanks and sorry one more item

_____

Try the following:

body .Sheet-body table
{
  position: static;
}

_____

With position:static, the initial problem appeared back (top menu disappears in IE7).

_____

I am switching back to position:relative to have a better look.

_____

It requires to modify site template. Add style="z-index: 2;" attribute for the first HTML table in container and style="z-index: 1;" for the second table.

Regards,
ARI Soft

_____

The language module is in user6 position and the top menu in user3.
Here is my old arrangement

that causes the initial problem.

Do you mean changing it, to:

I tried it with

.Sheet-body table

```
{
 position: relative;
}
```

but it does not solve the problem, unfortunately.

I will leave it that way for a while to have a look.

I realize that there is some kind of z-index issue, but I have no luck till now!

_____

There is no HTML table in my index.php file.

The container starts like this:

 // my lanuage module position
 // my top menu position

.
.
.
.

Sorry, if I don't understand the whole meaning of your words.
