
ARI menu not translated in specific article

Posted by kosfar - 2010/08/04 13:21

Hello!

Please, take a look at this article

<https://newsite.telecompare.gr/index.php/en/contact>

This is the only article of my website that the ARI menu is not translated to English! The menu and submenus are really pointing to English-translated articles but the words in the menu boxes remain in Greek...

I am sure this has something to do with my contact module (aiContactSafe module) but I am wondering if you can provide a solution or a clue for this.

Thanks a lot in advance!

Hello,

Do you create menu items in English or in Greek? If you create it in Greek why it should display in English?

Regards,
ARI Soft

The entire page I sent you should be in English (including the menus)...

This is the page that should be in Greek.

This isn't the module problem. This problem with contact component or with JoomFish.

Regards.
