
yui menu style

Posted by madrion - 2010/08/19 04:20

i am a novice at php and joomla so forgive me up front for probably a stupid question. I am simply trying to take the menu and put it in the style of the template instead of it being grey with black font it needs to look similiar to the static menu that appears above it but I need the drop down functionality that the yui menu will give me. you can take a look at the site at <http://dev.aledoadvocats.com> to see what I mean. any help would be greatly appreciated.

Hello,

Read this post on our forum, please. It contains information where description of the menu styles can be found.

Regards,
ARI Soft
