## Different sprite for menu

Posted by richard.verweij - 2010/08/23 20:49

---

Hi,

For someone I am working on a website on which they want two different layouts for the Yui Ari menu.

Can i use two sprites for this ? And if YES how ?

Can I use CSS STYLES ? Or do I need to change the CSS file itself ?

Hope you can help me.

Kind regards,  
Richard

Hello,

You can override necessary CSS styles with help 'CSS Styles' parameter, it provides ability to use #{id} predefined variable which helps to create specific CSS styles for current menu. More documentation about menu styles can be found in this post.

Hi,

Thanks for the reply, I have tried several options to change the sprite (whole different file) or different position on the default sprite but the only effect I get is that the background disappears all together.

Is there a CSS style overwrite I can use which will only change the options I fill in.

Can you give me an example CSS style using #{id} ?

Or can you give me a hint about where I am going wrong.

Hope to hear from you.

Greetz, Richard

Hello,

Try the next CSS rule:

```
body #{id}.yui-skin-sam .yuimenuubar
{
```

---

```
background-image: url(PATH_TO_IMAGE);
}
```

Hi,

Thanks again for the reply, i have tried this but it doesn't work. Please find my settings attached.

Can you see what I am doing wrong ?

Kind regards,

---

The code should look like:

```
body #{$id}.yui-skin-sam .yuimenubar
{
    background: url(modules/mod_ariyuimenu/mod_ariyuimenu/js/assets/menu/sam/sprite_bruin.png) repeat-x 0 0;
}
```

If it doesn't help, provide temporary access to your Joomla! backend by email that we can investigate this issue.

---

Edit CSS rule which we provided. You missed {\$id} in the CSS rule.

---

I might have overwritten you last change, because it doesn't work. Here is what I have now :

```
body #.{ $id }yui-skin-sam .{ $id }yuimenubar
{
  background: url(modules/mod_ariyuimenu/mod_ariyuimenu/js/assets/menu/sam/sprite_bruin.png) repeat-x 0 0;
}
```

Please bear with me, I should be able to solve this myself. Mucht thanks for the help sofar !

Kind regards,

Richard

## Re:Different sprite for menu

Posted by admin - 2010/08/31 09:13

---

Hm, it's incorrect code. Correct code looks like:

```
body #{$id}.yui-skin-sam .yuimenubar
{
  background: url(modules/mod_ariyuimenu/mod_ariyuimenu/js/assets/menu/sam/sprite_bruin.png) repeat-x 0 0;
}
```

Only indicate correct path to sprite image because  
/modules/mod\_ariyuimenu/mod\_ariyuimenu/js/assets/menu/sam/sprite\_bruin.png file doesn't exist.

Regards,

---

Changed the URL to : modules/mod\_ariyuimenu/mod\_ariyuimenu/js/build/assets/skins/sam/sprite\_bruin.png

This should be correct but menu doesn't change, I'm I missing somewhere ?

---

Open this page and don't change anything, please. You can see that the menu uses your sprite image as background. Is this what you need?
