# Menu Styling and positioning

Posted by thomshaw - 2010/11/01 11:50

_____

Hi there, Im just learning css and would like to know a couple of things about your menu. my site is www.sure-fire.co.uk

Firstly I would like the menu to be centered horizontally in my topMenu position. What would be the css for this?

Secondly, I would like the menu to be in #898989 bg color, and for the text to be arial font,

Thirdly i would like the sub menus to be transparent if possible.

Can you provide me with the css that Id need to put in the styling box on the module perameters page.

Thanks in advance!

_____

Hello,

Use the following CSS rules:

```
#header_wrapper .yuimenubar A.yuimenubaritemlabel,
#header_wrapper .yuimenubar A.yuimenuitemlabel
{
 font-family: Arial;
}

#header_wrapper .yui-skin-sam
{
 text-align: center;
}

#header_wrapper .yuimenubar
{
 display: inline-block !important;
}

#header_wrapper .yui-skin-sam .yuimenu .bd
{
 background-color: transparent;
}

#header_wrapper .yui-skin-sam .yuimenubar
{
 background: #898989 none;
}
```

Regards,
ARI Soft

_____

Thanks!

the support really is 1st class here!

one more thing. id like the menu to sit in a module 960px wide, all of which should have the 898989 bg color. ATM the menu has container bg color either side.

Any help?

Also id like the submenus to have greater spacing between the items, and have a 1px border of 898989 around them.

Id also like to change the hover action to show a different png, and for that png to be displayed on the active menu item. Any help here?

Sorry to bug!

_____

Use the following CSS rules:

```
/* on hover */
#header_wrapper .yui-skin-sam .bd ul li.yuimenubaritem-selected
{
 background: transparent;
 background-image: none; /* place path to necessary background image */
}

#header_wrapper .yui-skin-sam .yuimenuitem
{
  border-top: 1px solid #898989;
}

#header_wrapper .yui-skin-sam .yuimenuitem
{
  padding: 8px 0;
}

#header_wrapper .yui-skin-sam LI.first-of-type
{
 border-top: none;
}
```
