## Different Colors in in menu items

Posted by maorlast - 2010/11/01 18:15

---

How can i make different color for each menu item?

Thanks!

Hello,

Use the following CSS rule:

```
#top_menu .yui-skin-sam UL LI.yui-menu-item A.yuimenubaritemlabel
{
    background: red;
}
```

Where is ID of necessary menu item which can be found on menu item edit page. For example if you want to change background of the first menu item, use the next CSS rule:

```
#top_menu .yui-skin-sam UL LI.yui-menu-item73 A.yuimenubaritemlabel
{
    background: red;
}
```

That is great, works perfect!

How about if i just want the background color to be changed on Hover event (again, different colors on each menu item)

What will be the code for that? (item 73 for instance)

---

Use the following:

```
#top_menu .yui-skin-sam UL LI.yui-menu-item73 A.yuimenubaritemlabel-selected
{
    background: green;
}
```

Hi  
There is a problem with IE7 with your code on my site so i reverted it back.

I kindly need the main items will be in the same color of the Hover items  
very similar to tambour.co.il

I sent you my administrator password to the mail info@ari-soft.com

I appreciate your help very much!

Hello,

Could you explain what problem you have? When we open your site, selected main menu items have the same background color as sub-menu items.

I am sorry,

the following resolved my problem (which you already answered in this thread)

```
#top_menu .yui-skin-sam UL LI.yui-menu-item73 A.yuimenuBarItemLabel {  
  background: #05AEEF;  
}
```

Thanks again
