
Is it possible changing cursor in linkable items?

Posted by maorlast - 2010/11/02 16:20

I will try to explain my problem:

In the top menu that i created, I have several items that have sub items and several that don't have.

For the ones that have subitems, i created the main item as Joomla "separator" type (meaning that this is not a link just plain separator) and for its submenus i indeed created links.

The problem is that the user does not know which one is a real link and which is not. therefore i would like to create the "Hand with the pointing finger" curser that tells him which are links and which are not.

Thanks!

The module doesn't provide this ability. It requires modification of the module.
