
Apply menu CSS from Template to ARI YUI Menu

Posted by girkers - 2010/11/07 00:40

I like the menu style that came with the template, however it doesn't provide the drop down functionality that is provided by your menu. How do I go about copying the style from the template to your menu?

I have tried adding the CSS class name in the parameters of the Module but that doesn't work.

Thanks

Girkers.

Hello,

If you provide link to page where we can see site template default menu and "ARI YUI Menu" we can try to help.

Regards,
ARI Soft

www.bluewaterfestival.org.au

Template menu is on top with YUI menu underneath.

Thanks

Girkers

Cancel this as the owner of the site would like to tone down the amount of blue on the site, which the menu currently is, so I will leave the YUI-MENU the white colour it is now.

Thanks for your time.

Girkers.
