
Drop down menu displaying articles

Posted by nikoky - 2010/11/14 15:42

Hello,
I have a top menu that contains items which when clicked on display a "category blog layout".
I would like to use your module (either YUI or EXT - I am not sure which is the best suited) so that when I pause on the menu automatically the categories and article (or sections and categories and article) titles drop down below.
Is this possible with your module?
Thanks in advance for your help.
Regards,
nikoky

Hello,

The module can display menu items which are created with help Joomla! menu manager. It doesn't provide ability to select article category or section and display all articles from selected category in menu.
