
Drop down menu not working in SSL

Posted by jmarian1 - 2010/11/16 23:45

I have a problem just recently notice that when using the secure connection, the drop down menu is not working. The URL I am looking is <https://www.auw1.org/credit-card-donations>. When you go to the page , a pop-up window appear which is asking you if you want to load only the secure pages. If you click "YES" the menu problem appears but when you click "NO" everything is ok. Please help how to fix it so the menu will appear correctly in the SSL site. Thanks and hope to hear from you soon.

Hello,

Download and upgrade the module. It should help.

The latest version is 1.0.17, download it and install over installed module. Joomla! installator updated all necessary files.

It can be downloaded here. Use "Download ARI YUI Menu module for Joomla! 1.5" link.

Regards,
ARI Soft
