
How to put menu title inside border

Posted by janeinpa - 2010/12/05 00:17

I figured out how to do the css (some documentation would have been greatly appreciated!) Anyway, I really like the border, but I want to put my module title inside the border as well as the menu items. How do I do that?

Here is my site: http://216.162.89.94/index.php?option=com_content&view=category&layout=blog&id=20&Itemid=134

So I'd like to have High School Menu inside the menu border.

Hello,

Modules titles are rendered by site template, not by module.

OK, but can you give me some idea how to modify the site template css to put your menu border around the module title? Is there no way to do it? that would seem like something many people would want to do.

For example you can modify the module and add new parameter where you can specify title and display it by module.

Maybe someone can give me some specific code? I'm fairly new to this. I don't know how to do what you're saying.

Sorry, but we don't provide free custom development for our free extensions. BTW, if your site template support "Module class suffix", you can set "Module class suffix" parameter in module settings, create border for specific module class suffix and remove border around the menu for this specific class suffix.
