
How to insert Menu Class Suffix?

Posted by erikesq777 - 2010/12/12 18:51

The Joomla 1.5 template I am using uses a Menu Class Suffix of -nav to define the menu style.

I do not see this field in the ARI YUI Menu and inserting -nav into the module class suffix does not work.

How can I use the defined menu class suffix of "-nav" with this module.

Thanks

Hello,

Check that you use the latest version of the module (v. 1.0.17). It contains 'Module Class Suffix' parameter.

Regards,
ARI Soft

Thanks for your response. I need the "Menu Class Suffix" option. The version of ARI YUI Menu I am using has the Module Class Suffix.

Thanks,
