
USING THE MENU

Posted by animator - 2010/12/23 04:02

Hi guys.

Just new to Joomla and I have to take a web site that I built from scratch and convert it to Joomla. So far it's going well but my Flash drop down needs to be replaced and I chose your module.

I guess I just need some instruction on this this, I'm really confused but I keep reading about how impressive the mod is so I'm really excited to see what it can do.

Any direction would be great!

The site I'm converting is:

<http://www.arrowracing.ca/>

The main focus is the drop down.

Thanks!!

Hello,

"ARI Ext Menu" and "ARI YUI Menu" are Joomla! modules. It means these extensions can be run only under Joomla! CMS, but it seems your site doesn't use this CMS so the modules can't work on your site.

Hi there.

Thanks for getting back!!

I made this site but I'm making a new one for Joomla. The site's already well under way but the drop down has to be replaced unfortunately.

Can I adjust the height of the buttons so that they match what's in the site I made earlier? If you look, they line up with the graphic on the left side; I need to make your buttons match this. Also, I can't figure out how the CSS works, do I use my style sheet or the CSS box in the module and how?

Thanks, many more questions but I have to work in steps :)

You can place CSS rules in "CSS Styles" parameter in module settings or it site template CSS file. About height of buttons, we can try to help if you provide link to page where we can see the menu on your site.

Sorry, just to elaborate --the site link I provided is a site I made but I'm taking the graphics and applying it to Joomla. The client wants to be able to make revisions to the site without having to mess with a php database. So in essence, I'm just converting this site to Joomla.

You replied just as I was adding to my reply ... :)

Ok, so you know that the site I showed you is the one I'm converting to Joomla and all is well other than the DD menu.

Will the mod create HTML so that I may talk to it using CSS?

The module create HTML layout and includes CSS file with default styles. If you want to override CSS styles, you can place CSS rules to "CSS Styles" parameter in module settings or to site template CSS file.

I'm trying to use ariyuimenu for this site (at the moment the site is on my laptop). I have located the menu in the Joomla Breadcrumbs position but as you see the right margin of the menu box seems to be limited half way across the screen. The last item somehow exceeds the box and is shown one line lower. How can I ensure that the menu can extend across to the right of the screen? <http://www.ari-soft.com/images/fbfiles/images/ariyuimenu.jpg>

Hello,

This is a problem with site template styles, we need to see this page that we can help or you can use FireBug addon for FireFox browser that investigate this problem.

Re:USING THE MENU

Posted by christian.gibson - 2010/12/24 13:22

I have uploaded the site to <http://major-minor.nl>
As you can see the menutab 'Commerciele economie (CE)' drops down one line in the ARIYUImenu in the breadcrumbs position.

I am using the standard Rhuk-milkyway template. The only difference in template.css is a modification of the left and right margins of the breadcrumbs box (#pathway) in template.css lines 138 to 145:

/*****

* This is a template specific element from the Rhuk-milky way template in template.css

line nos. 138 to 145

I have modified the margin-left and margin-right to align the ARIYUImenu with the page content box

*****/

```
#pathway {  
padding: 0px 10px 8px;  
width: auto;  
margin-top: -2px;  
margin-left: 12px;  
margin-right: 12px;  
text-align: left;  
}
```

Re:USING THE MENU

Posted by admin - 2010/12/24 15:53

Add the following CSS rule:

```
body #search  
{  
height: 20px;  
}
```

Hi there.

Can I place my own background inside the buttons rather than just a solid colour?

There's absolutely nothing in this post that comes remotely close to my request.

Guess I'll just have to use another module.

"ARI YUI Menu" is based on YUI menu widget and link from our previous post contains information about HTML layout and styles of YUI menu widget. If you need more assistance, provide more info what background and for what buttons do you want to change. If you can provide an image where we can see it, it would be nice.
