
Sub-menu problem

Posted by Magun - 2011/01/10 01:04

Hello,

First of all, thank you for great Joomla modules.

I have a "small" problem. I use ARI YUI menu in two websites I'm creating. (I have been checking this forum for hours but haven't found the answer).

At the beginning everything (sub-menu) worked fine, there were no problems. Suddenly when changing mainmenu settings (attaching articles to menu items), arrows disappeared and sub-menu stopped working.

The page where problem is:
<http://magun.i8p.eu/maximacu.pl/>

My second page where the identical ARI YUI menu is installed, works perfectly:
<http://magun.i8p.eu/czapla.com.pl/>

And screenshots of module settings and mainmenu items:

<http://img153.imageshack.us/img153/9518/problem1s.jpg>
(CSS is empty)

Kind Regards,
Simon Magun

Hello,

The menu works in IE browser, but doesn't work in FireFox. It doesn't work because your page contains the following incorrect HTML code:

```
&nbsp;tel. 511-980-000
&nbsp;tel. 509-325-151
&nbsp;biuro@maximacu.pl
```

This code doesn't contain closed `<td>` tag. Correct code should look like:

```
&nbsp;tel. 511-980-000
&nbsp;tel. 509-325-151
&nbsp;biuro@maximacu.pl
```

Fix this and the menu will work fine.

Regards,
ARI Soft

Hello,

Thank you very very much. I was changing html code in a hurry and I forgout about . Now it works perfectly. Thank you for your help, although it wasn't ARI YUI Menu problem but my fault.

Kind Regards.
