## the subitems are hidden behind the contents

Posted by tepepa - 2011/01/14 14:30

---

Hi,

i have some problem using the vertical version of the ari ext menu:  
the subitems go behind the other modules and contents.  
I really can't understand where is the problem.

this is the link where you can see directly the problem:

[http://www.idepro.eu/con/index.php?option=com\\_content&view=article&id=48&Itemid=166&lang=it](http://www.idepro.eu/con/index.php?option=com_content&view=article&id=48&Itemid=166&lang=it)

i will appreciate your help!

Hello,

Add the following CSS rules:

```
div#contentleft,  
div#mainmiddle,  
div#main-shift  
{  
    overflow: visible;  
}
```

Regards,  
ARI Soft

You are incredible!

but..  
i have 2 more questions ( :S ):

1. what if i put the module in the left position like i did in this example:

[http://www.idepro.eu/con/index.php?option=com\\_content&view=article&id=48&Itemid=203&lang=it](http://www.idepro.eu/con/index.php?option=com_content&view=article&id=48&Itemid=203&lang=it)

2. the topmenu-items go behind the ari ext menu! :(

please, help me!  
i really like this extension and i'd like to use it!  
thanx

---

1. Use the following CSS rules:

---

```
#left div.mod-box div.box-3,
div#left
{
  overflow: visible;
}
```

2. Add the next CSS rule:

```
div#middle
{
  z-index: 1;
}
```

Your code works perfectly, but not for firefox:

only in the homepage, the menu doesn't work fine:

<http://www.idepro.eu/con/>

I've tried to change all the parameters of the module but without any changement.  
I've also tried to remove some previous module from the page..but..no results.

i'm sure that there is something that is bothering the ari ext menu, but i can't understand what!  
and why only fith firefox (ie and chrome work fine!)

Any idea?  
Thank you

It doesn't "ARI Ext Menu" problem. Your page contains incorrect HTML code, it doesn't contain closed tag. FireFox is sensitive for this errors. Fix it or provide temporary access to your Joomla! backend by email and we will try to help you.

AGAIN: you are right!!

i've found the problem (that is in one article in the home page): a p tag is missing!

thank you again!

---

The URL is [www.valleiweb.nl/dzg](http://www.valleiweb.nl/dzg).  
The subitems are also hidden behind the content.

In which css file should I place?

Greetings.

Add the following CSS rules:

```
.art-content-layout .art-sidebar1
{
  position: relative;
  z-index: 20;
}
```

```
.ux-menu LI
{
  margin: 0;
}
```

It's work in Firefox and IE.

It didn't work in Chrome.

---

Try to add the following CSS rule:

```
.art-content-layout .art-sidebar1 .art-block
{
  z-index: 20;
}
```

Thanks.

It's works
