
Beez5 overlapping submenus

Posted by bobqb14 - 2011/02/04 10:30

I am having trouble with the submenus not having a standard width to them and overlapping each other. I have searched through the forum and not found anything. Just wondering if anyone might be of some assistance. Here is the site link.

<http://mortgagecliffsnotes.com/>

Thanks in advance

Hello,

This problem with site template styles. Use the following CSS rule that fix it:

```
#header .ux-menu-container UL.ux-menu-sub LI A
{
  display: block !important;
}
```

Regards,
ARI Soft
