
ARI Ext Menu wont work on my joomla 1.6, please he

Posted by adnanali - 2011/02/08 13:04

i installed the ARI Ext Menu module on joomla 1.6(local host), but it wont wont work.on the default template of fruitshop it appears only on the welcome page else on none(it disappears)...does this module compatible with joomla 1.6?

Yes, it works fine with Joomla! 1.5 and 1.6. Could you provide screenshot of module settings page by email?

Regards,
ARI Soft

Menu disappears when you click by menu item because menu items from "Australian Parks" menu is assigned with "Beez2 - Parks Site" site template which doesn't contain "position-1" module position. Open "Extensions -> Template Manager -> Beez2 - Parks Site" page on Joomla! backend and see "Menus assignment" section:

Usually problems with menu styles (incorrect position, fonts and others) can occur if site template uses global CSS rules for some HTML elements.
