
ARI EXT MENU flickering in IE

Posted by dhljs - 2011/02/13 11:53

Hi,

In IE when the mouse cursor moves down the menu, the content below the menu is visible for a short time when the cursor crosses from one menu item to the next. It appears as if the content behind is flickering "through" the menu.

Is there any way to fix this behaviour?

Thanks in advance for your help, as well as for a great Joomla module.

Hello,

Provide link to page where we can see this issue that we can investigate it.

Hi,

Thanks for your quick reply. The site is members only, and it is nearly impossible to get a screenshot!! But I have made a screencast of the issue;

The problem only occurs with the menu for that page.
So when on the 'Home' page, only the Home menu is affected; When on the 'Charlton' page, only the Charlton menu is affected.

If I can provide anymore information please let me know.

Thank you again,

dhljs

Sorry, but we can't help in this case because we suppose this is a conflict with site template styles or 3rd party extension styles and we need to investigate this problem. Video or screenshot can't help to do it.
