individual Style Modules

Posted by maathu - 2011/02/19 03:40

_____

individual style modules, is an option that is displayed when configuring the module, and said that for each module allows me to create a different design or a different style but not where to begin or where to do it, I appreciate if I can give hand or help with this question.
thank you very much.

_____

Hello,

If you want to define specific CSS rules for specific module instance, you can use Module Class Suffix parameter in module settings or use module id in custom CSS rules, the module container on frontend has ID = "ariextmenu_ariext". Where is module ID.

Regards,
ARI Soft
