
transparent sub menu background & height

Posted by michasdh - 2011/02/19 17:41

Hello,
I use your menu as horizontal and have 2 problems with the submenu. The background of the sub menu is not visible. I don't know why. Is it possible to reduce the height of the sub menu?

<http://michasdh.cwsurf.de/>

Thanks for your help!! Micha

Hello,

Add the next CSS rules to "CSS Styles" parameter in module settings:

```
.ux-menu a:link,  
.ux-menu a:visited  
{  
    background-image: url(images/menu-item-bg.png)  
}
```

```
.ux-menu-container ul.ux-menu-sub a  
{  
    padding: 10px 14px;  
}
```

Regards,
ARI Soft

Thanks. Now the sub menu height is reduced and the the background of the sub menu is visible. But after adding this rules the images menu_item_bg_current and _over doesn't work. If you click on a menu item you see just for a moment one of these images. Very confusing. Micha

Add the following CSS rules to /modules/mod_ariextmenu/mod_ariextmenu/js/css/menu.min.css file:

```
.ux-menu a.current,  
.ux-menu a:link.current,  
.ux-menu a:visited.current  
{  
    background-image: url('images/menu-item-bg-current.png');  
}
```

```
.ux-menu a:focus,  
.ux-menu a:hover
```

```
{
background-image:url(images/menu-item-bg-over.png) !important;
}
```

Regards,
ARI Soft

Strange, now it looks like at the beginning. Maybe the template is the problem? The menu position is not top, it's "nldfn_menu". The original menu doesn't work like the way I want...

Add the next CSS rules to menu.min.css file and don't touch previous CSS rules please:

```
.ux-menu a.ux-menu-link-hover
{
background-image:url(images/menu-item-bg-over.png) !important;
}
.ux-menu a:link,
.ux-menu a:visited
{
background-image: url(images/menu-item-bg.png);
}

.ux-menu-container ul.ux-menu-sub a
{
padding: 10px 14px;
}
```
