## Multiply menus on the same page

Posted by ninJes - 2011/03/07 20:21

---

Hello!

Your menu is just great. Simple and functional. But I have one serious problem.

I want to use it twice on the same page with differen CSS styles.

One horizontal, second vertical. But it doesn't work together...

Also how I can adjust another CSS for my second menu?

Hello,

For example you can enter different CSS class prefix with help "Module Class Suffix" parameter (it requires that you site template supports CSS class prefix) and define specific CSS rules based on this prefix or type custom CSS rules in "CSS Styles" parameter in module settings and use predefined #{id} variable, it contains ID of menu container element.

Omg. Your answer about multiply CSS was in module unique ID description.. Thank you very much for fast answering.

But menu still doesn't work. It just appears opened at start.  
What can I do?

here is page.. I can't get it down without editing css of my exist mainmenu.

I tried .ux-menu ux-menu-horizontal ul, but it doesn't work :(

Now drop down doesn't work also. Something changed since I tried it last time..

This problem with site template styles. It contains specific CSS rules for "UL" element for position where horizontal menu is located. You can open /templates/bee\_20/css/layout.css file and find the next CSS rule:

```
#header ul {  
    display: block;  
    list-style-type: none;  
    margin: 0 0 1px;  
    padding: 10px 0;  
    position: absolute;  
    right: 0;  
    text-align: right;  
    top: 0;  
}
```

I tried already to remove all styles for #header ul.

Menu returns to it's place. But it still doesn't expand on hover:(

Set "Load ExtJS library" to "Yes" and "Assets loading method" to "Joomla! API" parameters for both menu module instances.

Unfortunately I don't have this parameters. I have only load method parameter.. I can switch it to onLoad instead of Dom only.

Hmm... very strange, but I don't have this parameters in mod\_ariextmenu. I am using Joomla 1.6. I have same parameters except ExtJS library  
Maybe I should download reinstall this module?

It seems you use not the latest version of the module. In any case, set "Assets loading method" parameter to "Joomla! API".

Thank you for such good and fast support. I downloaded this module something about one month or few weeks ago. I'll try to reinstall it tomorrow.
