## Spanish Language.

Spanish Language.

I have no accents or Ã± in the module. I just want a menu with categories and subcategories but with the options of language characters themselves.

What do I need to have enabled the language?

Hello,

Menu items are created in Joomla! menu manager. If you mean something another, describe it in more details please.

Regards,

ARI Soft

I want to use accents and the Ã± and I can not. What do I have to change to enable Spanish language characters themselves?

I want to use "JuÃ¡rez" and menu shows "Jurez" [http://www.ari-soft.com/images/fbfiles/images/Jua\\_\\_769\\_rez.jpg](http://www.ari-soft.com/images/fbfiles/images/Jua__769_rez.jpg)

The module doesn't change any characters. Send screenshot of menu items page from Joomla! menu manager.

## Issues with language accents

Posted by marmar - 2013/08/12 20:13

---

First of all my complements for your product. Looks great on our website!

But I do have an issue with the language accents that we use in the Portuguese language. As you can see in the screenprint, the carousel is replacing any accent like for example: Ã§, Ãµ, Ã£, Ã-, Ã¸, to a black diamond with white question mark.

Can you please tell me how I can adjust this, so the module will accept and show the accents correctly?

Many thanks in advance.

Arthur [http://www.ari-soft.com/images/fbfiles/images/ari\\_carousel\\_screen\\_print.jpg](http://www.ari-soft.com/images/fbfiles/images/ari_carousel_screen_print.jpg)

Great, that simple, this resolved the issue.

Many thanks,  
Arthur
